

EV BATTERY MODULE / PACK MANUFACTURING

Key Features:

- Reduced costs
- Minimize start-up times
- One source for troubleshooting IT and OT

MITSUBISHI ELECTRIC BY THE NUMBERS

10+ major
automotive customers
worldwide

15+ years

experience in the EV
battery market

12 product categories

in our comprehensive factory automation portfolio

3 types of batteries supported

4 major challenges solved

by MITSUBISHI ELECTRIC in the EV battery manufacturing process

Challenge 1
Multiple OEM designs

Module Line
Fully automated

Challenge 2
Line optimization

Pack Line
Semi-automated

Challenge 3
Worker safety

EoL Test Line
Data tracking

Challenge 4
IT-to-FA communication

Challenge 1

Multiple OEM Designs are complicated to install, operate and maintain.

SOLUTION

MEL-AVM control standardization framework gets systems up and running quickly.

- PLC & HMI project
- Common function blocks and labels
- Basic configuration

BENEFITS

- Reduce costs and start-up time for design, installation and adjustments by an average of 30 percent.
- Achieve consistent production quality throughout the line.

Different designs from each OEM

AM
Mitsubishi Electric Automotive Vehicle Manufacturing

Control standards

- PLC & HMI Project
- Common FB, Labels
- Basic configurations

MEL-AVM is a common system framework

Challenge 2

Short cycle times and multiple battery types in production leave little time for line optimization during installation.

SOLUTION

MELSOFT Gemini and MELFA RH-FR Series robots let you simulate equipment, line and labor operations in advance.

- PLC simulation
- HMI simulation
- Robot simulation

BENEFITS

- Minimize startup time in real time.
- Resolve conflicting cycle time, quality and flexibility demands.

MELSOFT Gemini

MELFA RH-FR SERIES

3D Simulator Software

Ensure functionality before installation to streamline manufacturing processes

Challenge 3

Ensuring worker safety in high-risk environments comes at a high cost.

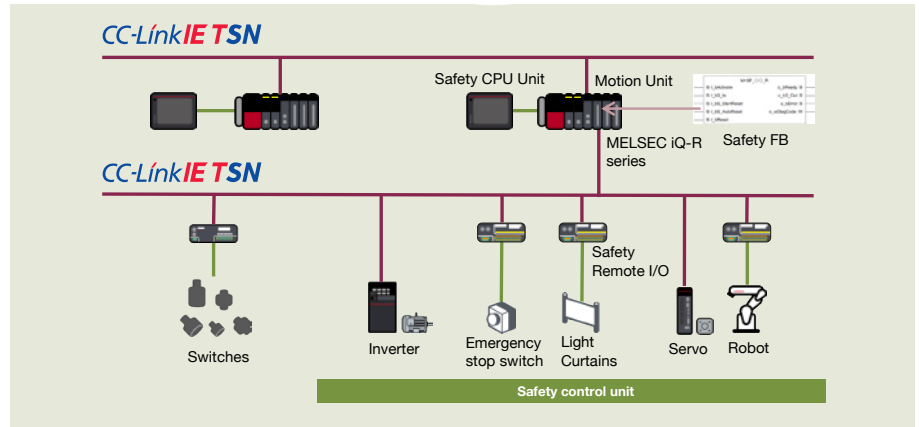

SOLUTION

CC-Link IE TSN is an open motion control network that integrates operational, field and peer-to-peer safety components in a single CPU.

- PLC
- SV
- VFD
- I/O
- and more

BENEFITS

- Avoid frequent machine shut-downs with safety monitoring functions.
- Reduce certification time and cost with safety function blocks.

Challenge 4

Establishing IT-to-OT communication for data management, when possible, can be a tedious process.

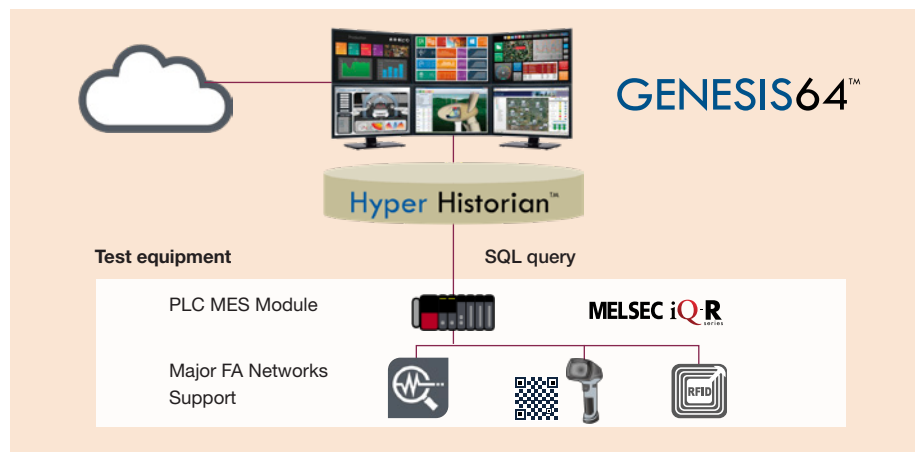

SOLUTION

GENESIS64 is a SCADA solution to manage your machine, line or entire plant.

- GENESIS64™ SCADA with server
- Hyper Historian™ data collector
- iQ-R PLC MES interface/OPC UA module
- FA network interface support

BENEFITS

- Gather data from multiple network components and upload SQL queries from the PLC.
- Integrate component, troubleshooting and system information in one database.
- One source for supporting/troubleshooting IT and OT.

MITSUBISHI ELECTRIC

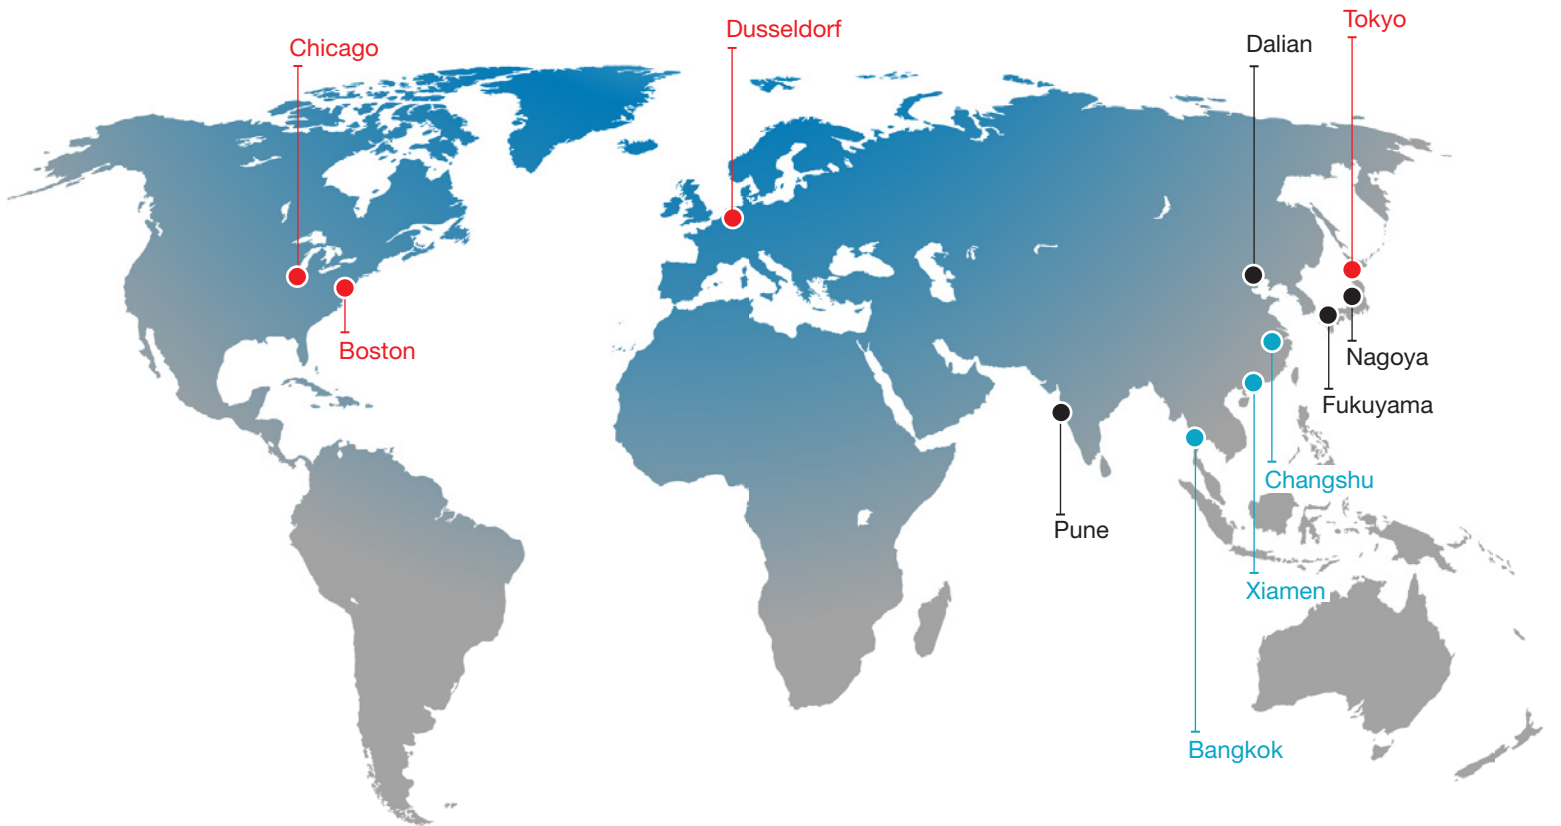

EV BATTERY DIGITAL MANUFACTURING

30 factory automation centers

12 factory automation center satellites

600+ sales and service bases

Global **one-stop** support for EV battery manufacturing

● Global Design

Boston
Chicago
Dusseldorf
Tokyo

● Global Design + Manufacturing

Dalian
Nagoya
Fukuyama
Pune

● Manufacturing

Bangkok
Changshu
Xiamen
