About Us

LLumin develops innovative operations software to manage and track assets in industrial factories, municipalities and universities. The company's founder, executives and designers bring decades of experience and enthusiasm to the development of leading-edge asset and materials management software that improves productivity and enhances safety and compliance. With a company culture that unifies everyone and core values that focus on customer needs, LLumin has been able to evolve and thrive.

e-F@ctory Solutions Provided

LLumin is the first computerized maintenance management system (CMMS) that uses machine-level data to alert plant and operations managers of abnormalities — and how to resolve them. Our cloud-based software gives you full visibility over every asset in your facility, and every key parameter of each asset, to nip problems at their source and eliminate unplanned downtime.

LLumin has an intuitive, rules-based engine that works seamlessly out of the box to trigger preemptive maintenance. LLumin was designed for business and operations personnel. You can create any rule your operations need to give your team control over downtime and dramatically improve performance.

Complementary Products
