## About Us

BEET is located in the metro Detroit area, automotive capital of the world, and home to some of the most complex automation systems in existence. With decades of experience in the automation systems industry, BEET creates products and solutions that help companies be more proactive, more accountable, and more efficient than ever before. Our guiding principle has always been to simplify the complicated. With our products, we're doing exactly that for a wide variety of complex factory lines and processes.

## e-F@ctory Solutions Provided

Beet's unique patented technology is the foundation to I4.0 allowing for near real-time visualization of every motion and device in the manufacturing process to provide actionable information that can be used to make quick throughput improvements of over 5% or more without adding any additional hardware to the equipment or process. We have proven we can help answer three major issues that affect the bottom line in the manufacturing process: 1) What is wrong now? 2) What might go wrong? and 3) Where is the hidden capacity? The tool is predictive, non-intrusive, and very intuitive.

## Complementary Products

Robotics and Motion Controls used in CNC Machining, Assembly and Casting/Molding

## Core Technology

Equipment Communications and Movement Analytics

## Industries Served

Aerospace  
Automotive  
Manufacturing

Casting  
Molding
